

TABLE OF CONTENTS

Volume 1

	Page No.
<i>Preface</i>	iii
<i>Co-organising and Programme Committee</i>	iv
KEYNOTE PAPERS	
Engineering design and analysis using computer models: Are we going too fast or not fast enough? <i>Vytenis Babrauskas, Fire Science and Technology Inc., USA</i>	1
Are new construction trends compromising fire safety? <i>Debbie Smith, BRE, UK</i>	11
MATERIALS TESTING	19
Fire performance of wood-based room lining materials <i>James Mehaffey, FPInnovations – Forintek Division, Canada and J Huczek, M Janssens, SWRI Fire Technology, USA</i>	21
Durability of the reaction to fire performance of FRT wood products in interior and exterior applications <i>Birgit Östman, L Tsantaridis, SP Trätek / Wood Technology, Sweden</i>	33
Flame spread on a solid wooden ceiling <i>Vidar Stenstad, Norwegian Building Research Institute, Norway and B Karlsson, Iceland Fire Authority, Iceland</i>	45
Assessment of fire properties for painted surfaces in escape routes <i>Anne Steen-Hansen, B Kristoffersen, SINTEF NBL, Norway</i>	59
Phosphorus-containing polymeric materials: The impact of pyrolysis on flame retardancy <i>Bernhard Schartel, U Braun, K Pawlowski, Federal Institute for Materials Research and Testing, Germany</i>	71
Nanoclay effect on flammability properties of poly (1,4-butylene terephthalate) mixed with phosphorus based fire retardant <i>Dimitri Bakirtzis, A Schmitt, M McKee, J Zhang, M Delichatsios, FireSERT, UK</i>	79
The influence of floor coverings on room fires <i>Patrik Johansson, J Axelsson, T Hertzberg, SP Technical Research Institute, Sweden</i>	89
Measuring the effective heat of gasification <i>Joe Urbas, W Parker, Chilworth Pacific Fire Laboratories, Inc., USA</i>	101
Parameters to assess the flammability of water-based hydraulic fluids <i>Mohammed Khan, P Chatterjee, J de Ris, FM Global, USA</i>	113
Reaction to fire behaviour of pavement surfaces <i>Sarah Colwell, C Rock, BRE, UK</i>	123
Improving survivability in motor vehicle fires <i>Marcelo Hirschler, GBH International, K Digges, R Stephenson, MVFRI, R Gann, NIST, R Lyon, FAA, J Quintiere, University of Maryland, A Tewarson, FM Global, USA and</i>	

<i>S Grayson, Interscience Communications, D Purser, BRE, UK</i>	135
Measuring the ignition propensity of cigarettes <i>Richard Gann, NIST, USA</i>	145
EGRESS/EVACUATION	157
Emergency egress strategies for buildings <i>Richard Bukowski, NIST, USA</i>	159
The UK WTC 9/11 evacuation study: Methodologies used in the elicitation and storage of human factors data <i>Ed Galea, R Day, L Hulse, A Siddiqui, University of Greenwich, J Shields, K Boyce, L Summerfield, University of Ulster and D Canter, M Marselle, M Greenall, University of Liverpool, UK</i>	169
Evaluation and comparison of different installations of photoluminescent marking in stairwells of a highrise building <i>Noureddine Bénichou, G Proulx, National Research Council, Canada</i>	183
Effect of occupants and room and system characteristics on speech intelligibility measurements for emergency voice communication systems <i>John Woycheese, Hughes Associates, Inc., USA</i>	195
Identifying critical evacuation factors and the application of egress models <i>David Purser, Hartford Environmental Research, UK and S Gwynne, Hughes Associates, Inc., USA</i>	203
Reproduction of smoke propagation in the Daegu metro station fire <i>Myungbae Kim, B Choi, C Oh, Y Han, Korea Institute of Machinery & Materials, Korea</i>	215
Identifying important factors affecting civilian fatality in apartment fires <i>Ian Thomas, J Qu, A Hasofer, CESARE Victoria University, Australia</i>	223
How reliable are commercial software-tools for evacuation calculation? <i>Christian Rogsch, W Klingsch, H Weigel, University of Wuppertal and A Seyfried, Centre for Applied Mathematics, Germany</i>	235
Capacity estimation for emergency exits and bottlenecks <i>Armin Seyfried, O Passon, B Steffen, M Boltes, Central Institute for Applied Mathematics and T Rupprecht, A Winkens, W Klingsch, University of Wuppertal, Germany</i>	247
Simulating the evacuation of very large populations in large domains using a parallel implementation of the buildingEXODUS evacuation model <i>Angus Grandison, Y Muthu, P Lawrence, E Galea, University of Greenwich, UK</i>	259
Development and validation of a crawling model in an existing computational egress tool <i>Steve Gwynne, Hughes Associates, Inc. and R Muhdi, J Davis, Auburn University, USA</i>	271
SUPPRESSION	283
Physical scaling for water mist fire suppression – A design application <i>James Quintiere, University of Maryland, N Schultz, VTEC Laboratories, USA and G-Y Su, National Fire Agency, Taiwan</i>	285
On the use of window sprinkler to prevent vertical fire spread <i>Alf Nilsen, J Brekken, Stord/Haugesund University College, Norway</i>	301

Evaluation model of water mist fire suppression under forced ventilation <i>Zhu Wei, W Tong, Beijing Municipal Institute of Labour Protection, L Guangxuan, University of Science and Technology of China and J Longzhe, University of Science and Technology of Beijing, PR China</i>	313
CFD modelling of fire suppression by water mist <i>Yehuda Sinai, C Staples, ANSYS Europe Ltd and M Edwards, M Smerdon, MoD, UK</i>	323
Assessment of the effects of configuration, product loading, and water application on the heat release rate of burning plastic bakery trays <i>Martin Pabich, Underwriters Laboratories Inc. and F Fangmann, Sara Lee Corporation, USA</i>	335
Tenability comparison of detectors and sprinklers in television set fire tests <i>Jonathan Shelley, Connell Wagner, Australia and M Spearpoint, University of Canterbury, New Zealand</i>	347
Can water mist be used to extinguish deep-seated cellulose fibre smouldering fires? – Experiments and calculations <i>Ulf Göransson, Lund University, Sweden and B Husted, Danish Institute for Fire and Security Technology, Denmark</i>	359
Fire and fire extinguishment in silos <i>Henry Persson, P Blomqvist, SP Technical Research Institute, Sweden</i>	365
TESTING METHODS	377
Steady-state heat flux measurements in radiative and mixed radiative-convective environments <i>Cecilia Lam, E Weckman, University of Waterloo, Canada</i>	379
A small-scale controlled equivalence ratio tube furnace method – experience of the method and the link to large scale fires <i>Per Blomqvist, T Hertzberg, H Tuovinen, SP Technical Research Institute, Sweden</i>	391
Method to obtain large scale burning rate of liquids with lab scale tests <i>Carine Chivas, J-P Bertrand, S Duplantier, INERIS and L Audouin, L Rigollet, IRSN, France</i>	403
Reduced-scale ventilation-limited enclosure fires – heat and combustion product measurements <i>Erik Johnsson, M Bundy, A Hamins, NIST, USA</i>	415
Evaluating the rate of heat release for energetic materials by use of the fire propagation apparatus <i>Hubert Biteau, J Torero, University of Edinburgh, UK and G Marlair, J Bertrand, INERIS, France</i>	427
Heat impact and flame heights from fires generated in single burning item tests <i>Jianping Zhang, M Colobert, J Hereid, M Hagen, D Bakirtzis, M Delichatsios, FireSERT, UK</i>	441
A new approach to ventilation measurements in enclosure fires <i>Rodney Bryant, NIST, USA</i>	453
Oscillation and fire area shrinkage phenomena of wood crib and heptane pool in ventilation-controlled compartment fires	

<i>James Quintiere, University of Maryland and Y Utiskul, ArupFire, USA</i>	465
MODELS FOR ENGINEERING PREDICTION	477
Simulation of visibility in smoke laden environments <i>Philip Rubini, Q Zhang , University of Hull and J Moss, Cranfield University, UK</i>	479
Experimental study on fire-induced smoke propagation between confined and forced-ventilated rooms – Preliminary results of a reduced-scale model <i>Caroline Lucchesi, H Pretrel, Institut de Radioprotection et de Sûreté Nucléaire (IRSN) and O Vauquelin, P Bournot, Institut de Mécanique de Marseille (IM2), France</i>	491
A study of fire dynamics simulator version 4.0 for tunnel fire scenarios with forced longitudinal ventilation <i>Esther Kim, J Woycheese, N Dembsey, Worcester Polytechnic Institute, USA</i>	503
Computer modelling of basement fires <i>Jennifer Wen, S Ferraris, Kingston University and B Hume, J Fay, K Bosley, Department for Communities and Local Government, UK</i>	517
Analysis of FDS thermal detector response prediction capability <i>Morgan Hurley, Society of Fire Protection Engineers, A Munguia, Schirmer Engineering, USA</i>	531
Mathematical and physical modelling of smoke spread in atria-type experimental set-ups <i>Volker Schneider, Integrierte Sicherheitstechnik GmbH, Germany</i>	541
Scale-model experiments of smoke management options for residential multi-storey buildings <i>Stewart Miles, N Marshall, BRE, UK</i>	553
Mathematical prediction of thermal degradation behaviour of flame retarded epoxy resin formulations <i>Everson Kandare, B Kandola, P Myler, R Horrocks, University of Bolton and J Staggs, University of Leeds, UK</i>	565
Predicting the burning behaviour of communication cables inside cavities using bench-scale test data <i>Suresh Kumar, BRE, UK</i>	577
STRUCTURAL FIRE RESISTANCE	591
Structural collapse research at NIST <i>David Stroup, N Bryner, NIST, USA</i>	593
Multi-storey fire analysis for high-rise buildings <i>Guillermo Rein, X Zhang, L Torero, University of Edinburgh and P Williams, B Hume, A Heise, A Jowsey, B Lane, Arup Fire, UK</i>	605
Experimental and numerical investigation of post-tensioned unbonded concrete slabs in fire <i>Colin Bailey, University of Manchester, UK and E Ellobody, Tanta University, Egypt</i>	617
Predicting the demand on fire-exposed perimeter members in a high-rise steel building frame <i>Spencer Quiel, M Garlock, Princeton University, USA</i>	629
Studies on the fire behaviour of steel columns embedded on walls <i>António Correia, Instituto Politécnico de Coimbra, J Rodrigues, Universidade de</i>	

<i>Coimbra, Portugal and V Pignata e Silva, Universidade de S Paulo, Brazil</i>	641
Structural response of fiber reinforced plastic composites during fires <i>Brian Lattimer, J Ouellette, C Mealy, B Ramroth, Hughes Associates, Inc. and R Asaro, University of California-San Diego, USA</i>	653
Thermodynamic analysis of the fire performance of structural wood-metal composites <i>Josef Wolfsgruber, M Rudy, Vienna University of Technology, Austria</i>	665
POSTERS	677
DETECTION AND SUPPRESSION	679
The effectiveness of sprinklers in residential premises – an evaluation of concealed and recessed pattern sprinkler products <i>Kelvin Annable, C Williams, BRE, UK</i>	681
Research on numerical simulation comparing with experiments for water mist fire-extinguishing process of oil pan fire in large space <i>Su Lin, H Chuanping, Q Xinggui, Shanghai Fire Research Institute, PR China</i>	689
Experimental and numerical investigation of suppressing cup-burner frames with water vapor <i>Wei Zhu, B Cong, G Liao, University of Science and Technology of China and Z Huang, Shanghai Jiaotong University, PR China</i>	695
PRODUCTS AND MATERIAL TESTING	701
Physical behavior and decomposition chemistry of polymer foams exposed to fire environments <i>Kenneth Erickson, S Trujillo, K Thompson, Sandia National Laboratories, USA</i>	703
Comparisons of some small-scale flammability properties of some polyolefin compounds blended with expandable graphite <i>Yuichi Nakagawa, National Institute of Advanced Industrial Science and Technology, Y Kumagai, Y Tomita, SGC Company Limited and K Saito, T Motoki, Y Ichige, K Nihei, Prefectural Industrial Technology Center of Ibaraki, Japan</i>	709
Efficiency prediction of thermal protection provided by intumescent systems <i>Jean-Jacques Serra, L Autrique, M Gillet, Délégation Générale pour l'Armement and L Perez, Laboratoire de Thermocinétique de Nantes, France</i>	719
Phenomenological description of actual electrical cabinet fires in a free atmosphere <i>Mickaël Coutin, Institut de Radioprotection et de Sûreté Nucléaire (IRSN), France</i>	725
Assessment of polymeric cables and materials for use in rail coaches based on HRR, combustion smoke and toxicity <i>B Nageshwar Rao, R Arun Jothi, A Srinivasan, A Sudhindra, Central Power Research Institute, India</i>	731
Mattress size and shape dependences of heat release rate history of urethane <i>Norichika Kakae, Y Ohmiya, Tokyo University of Science, K Harada, Kyoto University and T Tsuchihashi, Y Tanaka, General Building Research Corporation of Japan, Japan</i>	739
Tools for developing wood based products with improved fire performance <i>Lazaros Tsantaridis, SP Trätec / Wood Technology, Sweden and T Hakkarainen, E Mikkola, VTT Technical Research Centre, Finland</i>	745

STRUCTURAL FIRE RESISTANCE	751
Heating test of rock-fibre insulation <i>Hisa Takeda, LGS, Canada</i>	753
A model to predict fire resistance of wood floor assembly <i>Hisa Takeda, LGS, Canada</i>	759
Fire-resistance of fire-retardant-impregnated laminated lumber <i>Toshiro Harada, Forestry & Forest Products Research Institute, N Hattori, K Ando, Tokyo University of Agriculture and M Miyabayashi, T E Consulting Inc, Japan</i>	765
Fire safety of external timber wall facades <i>Sarah Colwell, J Bregulla, R Cullinan, BRE, UK</i>	771
Fire performance of old wooden doorsets <i>Eva Andersson, G Jensen, COWI AS, Norway</i>	777
Effect of elevated temperatures on the bond between FRP and concrete <i>Diana Petkova, T Donchev, J Wen, K Etebar, H Hadavinia, Kingston University, UK</i>	783
Comparison of simple and advanced models for predicting membrane action on long span slab panels in fire <i>Wee Toh, SAFE Consulting Limited and C Bailey, University of Manchester, UK</i>	791
Author Index	797

Volume 2

<i>Preface</i>	
<i>Co-organising and Programme Committee</i>	
DYNAMICS	801
Trajectory of window flame attaching to the wall above the opening <i>Keisuke Himoto, T Tanaka, Kyoto University and T Tsuchihashi, Y Tanaka, General Building Research Corporation of Japan, Japan</i>	803
Numerical simulation of upward flame spread: Application of a realizable k- ϵ turbulence model and an extended integral model for pyrolysis <i>Bart Merci, K Van Maele, Ghent University, Belgium</i>	815
Interaction between natural convection and chemical reaction in spontaneous ignition of solids <i>Siew Mei Lim, M Yit Lin Chew, National University of Singapore, Singapore</i>	827
Effect of fuel sootiness on the occurrence of flashover <i>Kuang-Chung Tsai, C-C Shih, H-H Chen, National Kaohsiung First University of Science and Technology, Taiwan</i>	839
Developing extinction criteria for fires <i>André Marshall, J Williamson, A Trouvé, University of Maryland, USA</i>	849
On the use of a firebrand generator to investigate the ignition of structures in wildland-urban interface (WUI) fires <i>Samuel Manzello, J Shields, J Yang, NIST, USA and Y Hayashi, D Nii, Building Research Institute, Japan</i>	861
Assessment of the impact of computed and measured fire environments on building evacuation using bench and real scale test data <i>James Robinson, FROCC, Belgium, T Hull, K Lebek, A Stec, University of Bolton, E Galea, A Mahalingam, F Jia, M Patel, University of Greenwich, T Journeaux, Europacable, UK and H Persson, SP Technical Research Institute, Sweden</i>	873
MODELLING	885
Application of fuel mass loss rate model for various fuel types and scales <i>Tensei Mizukami, The Centre for Better Living, Japan and J Quintiere, Y Utiskul, University of Maryland, USA</i>	887
Development of a turbulent soot-radiation model for buoyancy driven non-premixed flames <i>Prateep Chatterjee, J de Ris, FM Global, USA</i>	897
Multiple parameter mixture fraction with two-step combustion chemistry for large eddy simulation <i>Jason Floyd, Hughes Associates, Inc. and K McGrattan, NIST, USA</i>	907
Assessment of steady and unsteady CFD simulations of a single side well-ventilated fire in a small compartment <i>Bart Merci, K Van Maele, Ghent University, Belgium</i>	919
Modeling polymer melt flow using the particle finite element method	

<i>Kathryn Butler, NIST, USA and E Oñate, S Idelsohn, R Rossi, International Center for Numerical Methods in Engineering, Spain</i>	929
FIRE RESISTANCE	941
Adiabatic surface temperature for calculating heat transfer to fire exposed structures <i>Ulf Wickström, SP Technical Research Institute, Sweden and D Duthinh, K McGrattan, NIST, USA</i>	943
Development of a simplified model aimed at predicting external members heating conditions <i>Sylvain Desanghere, CTICM, France</i>	955
Predicting the temperature rise in light-frame wood floor assemblies exposed to fire <i>Steve Craft, J Mehaffey, FPInnovations and G Hadjisophocleous, B Isgor, Carleton University, Canada</i>	967
Gypsum board fall-off temperature in floor assemblies exposed to standard fires <i>Mohamed Sultan, A Roy-Poirier, National Research Council of Canada, Canada</i>	979
Structural fire response of tall buildings in multi-storey fire events <i>Barbara Lane, A Heise, G Flint, Arup Fire, UK</i>	993
KEYNOTE PAPER	1005
20/20 hindsight: Are we learning the right lessons from major fires? <i>John Hall, NFPA, USA</i>	1007
TOXICITY	1019
Assessing the accuracy of a physical fire model for obtaining smoke toxic potency data <i>Richard Gann, J Averill, N Marsh, M Nyden, NIST USA</i>	1021
The application of exposure concentration and dose to evaluation of the effects of irritants as components of fire hazard <i>David Purser, Hartford Environmental Research, UK</i>	1033
Predicting toxic species concentrations in a full-scale vitiated fire <i>Z Wang, F Jia, E Galea, M Patel, FSEG, University of Greenwich, UK</i>	1047
Carbon monoxide and smoke emissions in fires <i>Archibald Tewarson, M Khan, FM Global, USA</i>	1059
Removal of fire odor <i>Tuomas Paloposki, K Belloni, K Tillander, K Villberg, K Saarela, VTT, Finland</i>	1071
Corrosion and electrical damage by smoke in fires <i>Paul Su, A Tewarson, FM Global, USA</i>	1083
CODES AND REGULATIONS	1093
Implementation of the Construction Products Directive (CPD) in Europe related to fire performance – How is it going? <i>Christine Lukas, Dow Chemical Company Limited, UK</i>	1095
The FIGRA-index: European classification of ordinary building products, cables and pipe insulation. The technical background and the relation to product burning behaviour <i>Björn Sundström, SP Technical Research Institute, Sweden</i>	1105
Development of conetools for the Euroclasses of cables	

<i>Patrick Van Hees, J Axelsson, SP Technical Research Institute, Sweden and V Maret, University of Valenciennes, A Piechaczyk, C Dinkelmeyer, Nexans Research Centre, France</i>	1117
Fire losses, fire hazard and fire risk associated with plenum cables <i>Marcelo Hirschler, GBH International, USA</i>	1129
The use of fire statistics in guiding research and code development <i>Russell Thomas, National Research Council, Canada</i>	1139
FIRE INVESTIGATION	1149
The metallic damage to electrical conductors at fire scenes <i>Nicholas Carey, London Fire Brigade and N Nic Daeid, University of Strathclyde, UK</i>	1151
Microwave fire detection: A survey and assessment <i>David Icove, C Lyster, The University of Tennessee, USA</i>	1163
Fatal training fires: Fire analysis for the fire service <i>Daniel Madrzykowski, NIST, USA</i>	1169
Reconstructing The Station Nightclub fire – Computer modeling of the fire growth and spread <i>Nelson Bryner, D Madrzykowski, W Grosshandler, NIST, USA</i>	1181
Investigations of the fire in the detention centre at Schiphol-East, 26 October 2005 <i>Peter van de Leur, F Jakobs, M Haas, M Klein, DGMR Bouw b.v., The Netherlands</i>	1193
Investigation of a multiple fatality dormitory fire at Seton Hall University <i>Gerald Haynes, Forensic Fire Analysis and M Morris, Office of the Essex County Prosecutor, USA</i>	1205
FIRE SAFETY ENGINEERING	1217
A research agenda for the next generation of performance-based design tools <i>William Grosshandler, NIST, USA</i>	1219
The potential role and contribution of fire safety to sustainable buildings <i>David Charters, J Fraser-Mitchell, BRE, UK</i>	1231
Fire safety engineering design of densely built residential areas <i>Jukka Hietaniemi, VTT, Finland</i>	1243
QRA and fire safety – A beneficial experience... <i>Matthew Salisbury, P Johnson, E Yii, M Hui, Arup Fire - UK, Australia and Hong Kong</i>	1253
New statistics on sprinkler reliability and performance <i>John Hall, NFPA, USA</i>	1265
SMOKE MOVEMENT	1275
Investigating positive pressure ventilation <i>Oforiye Ezekoye, The University of Texas, R Nicks, Austin Fire Department, USA and S Svensson, Swedish Rescue Services Agency, Sweden</i>	1277
Evaluation of fire service positive pressure ventilation tactics on high-rise buildings <i>Stephen Kerber, NIST, USA</i>	1289
Detailed numerical study of the onset of untenable conditions from large fires in longitudinally ventilated road tunnels	

<i>David Charters, S Miles, C Mayfield, BRE, UK</i>	1301
TUNNELS	1313
“UPTUN”: A risk assessment methodology for fires in tunnels <i>Jeremy Fraser-Mitchell, BRE, UK, I Trijssenaar-Buhre, TNO Environment and Geosciences, The Netherlands and F Waymel, INERIS, France</i>	1315
The influence of tunnel dimensions on fire size <i>Anders Lönnemark, H Ingason, SP Technical Research Institute, Sweden</i>	1327
Assessment of the improvement in fire safety provided by upgrading the ventilation system of a major road tunnel <i>Antoine Mos, B Brousse, Centre d'Études des Tunnels, G Giovannelli, Agefluid, A Chabert, SFTRF, France</i>	1339
POSTERS	1351
COMBUSTION	1353
Turbulent lifted flames near blowout conditions in air co-flows <i>Kevin Lyons, N Moore, J McCraw, North Carolina State University, USA</i>	1355
Phenomenological study of large-scale pool fire behaviour in free atmosphere <i>Hugues Pretrel, C Lucchesi, P Guillou, Institut de Radioprotection et de Sécurité Nucléaire (IRSN), France</i>	1363
Usefulness of finer grid to increase the approximation quality of LES-based CFD-calculations related to buoyancy-driven flows <i>Dimitrios Toris, C Rogsch, University of Wuppertal and A Seyfried, Research Centre Jülich, Germany</i>	1369
The thermal environment in a wind-blown fire plume <i>Elizabeth Weckman, C Lam, University of Waterloo, Canada</i>	1373
Evaluation of various bio-mass fuels with heat flux measurements and gas vaporization test <i>Xin-Rui Li, H Koseki, Y Iwata, W-S Lim, National Research Institute of Fire and Disaster, Japan</i>	1379
Experimental analysis of jet fire impingement on industrial pipe <i>Stéphanie Patej, T Durussel, INERIS, France</i>	1389
Experimental investigation of the influence of gas hydrodynamics on backdraft ignition conditions <i>Georges Guigay, J Eliasson, University of Iceland, B Karlsson, Iceland Fire Authority, Iceland and J-M Most, F Penot, CNRS, ENSMA, France</i>	1397
An experimental study on a fixed-frame type fire whirl <i>Ken Matsuyama, T Kobayashi, Y Ohmiya, Tokyo University of Science and F Tanaka, University of Fukui, Japan</i>	1403
EVACUATION / EGRESS	1409
Agent-based emergency egress simulation with steering behaviors <i>Charles Thornton, R O'Konski, B Hardeman, Thunderhead Engineering Consultants, USA</i>	1411
PyroSim: A dynamic graphical user interface for the fire dynamics simulator and Pathfinder: A companion egress model	

<i>Daniel Gemeny, A Kline, Rolf Jensen & Associates, Inc. and B Hardeman, Thunderhead Engineering Consultants, Inc., USA</i>	1417
Bottleneck capacity estimation for pedestrian traffic <i>Tobias Rupprecht, W Klingsch, University of Wuppertal and A Seyfried, M Boltes, Central Institute for Applied Mathematics, Research Centre Jülich, Germany</i>	1423
Fire response performance in a hotel. Behavioural research <i>Margrethe Kobes, N Oberijé, N Rosmuller, Netherlands Institute for Safety, I Helsloot, Vrije Universiteit Amsterdam and B de Vries, Eindhoven University of Technology, The Netherlands</i>	1429
Investigating the impact of occupant response time on computer simulations of the WTC North Tower evacuation <i>Ed Galea, G Sharp, P Lawrence, A Dixon, University of Greenwich, FSEG, UK</i>	1435
FDS+EVAC: Evacuation module for fire dynamics simulator <i>Timo Korhonen, S Hostikka, VTT, S Heliövaara, H Ehtamo, Helsinki University of Technology, K Matikainen, University of Helsinki, Finland</i>	1443
MODELLING	1449
Modeling issues for the fire dynamics reconstruction in a two room, single story, setup <i>Fabio Alaimo Ponziani, A Tinaburri, Ministry of the Interior, Italy</i>	1451
CFD and FEM coupling with computer codes FDS and ANSYS for fire resistance assessment <i>Bin Zhao, S Desanghere, J Darche, CTICM, France</i>	1461
Adapting a fire model for a unique application – Case study: NASA vehicle assembly building <i>Craig Hofmeister, Rolf Jensen and Associates, Inc., USA</i>	1467
An enhanced two-zone fire model for risk analysis <i>Yi Wang, L Parada, M Wang, A Singhal, Risk Management Solutions, USA</i>	1473
Using fire dynamics simulator for flame spread and fire growth modeling <i>Andrew Coles, A Wolski, Arup and C Lautenberger, University of California, USA</i>	1479
Fire of electric/electronic cabinets <i>Penh Lamuth, J Lassus, CEA/DPSN and J-P Vantelon, University of Poitiers, France</i>	1485
Introducing a hybrid field/zone modelling approach for fire simulation <i>D Burton, A Grandison, M Patel, E Galea, J Ewer, University of Greenwich, FSEG, UK</i>	1491
TESTING	1499
Ignition and flame spread properties of wood, elaborated during a new test method based on convective heat flux <i>Lars Schioett Sørensen, Technical University of Denmark and A Poulsen, Birch and Krogboe, Denmark</i>	1501
Scale modeling of the transient thermal response of insulated structural frames exposed to fire <i>Jonathan Perricone, Schirmer Engineering, J Quintiere, University of Maryland and M Wang, Risk Management Solutions, USA</i>	1507
Controlled atmosphere bench-scale calorimetry revisited	

<i>Charles Fourneau, S Brohez, Faculté Polytechnique de Mons, H Breulet, ISSeP, Belgium and G Marlair, INERIS, France</i>	1515
WILDLAND	1521
Heat transfers involved in wildfire spread <i>Frédéric Morandini, X Silvani, Université de Corse, France</i>	1523
Experimental study of fire spread through a shrub fuel beds in a model tunnel <i>Xavier Rocourt, K Chetehouna, I Sochet, Laboratoire Energétique Explosions et Structures and O Séro-Guillaume, LEMTA, France</i>	1529
FIRE SERVICE AND FIRE INVESTIGATION	1535
Fourier transform techniques for imaging performance evaluations of thermal imaging cameras used by the fire service <i>Francine Amon, NIST and A Ducharme, University of Central Florida, USA</i>	1537
Combustion properties of human and large animal remains <i>John DeHaan, Fire-Ex Forensics and E Pope, University of Arkansas, USA</i>	1543
Reconstructing The Station Nightclub fire – materials testing and small-scale experiments <i>Nelson Bryner, D Madrzykowski, W Grosshandler, NIST, USA</i>	1549
A short circuit as an ignition source of fire <i>Yasuaki Hagimoto, N Watanabe, K Okamoto, National Research Institute of Police Science, Japan</i>	1555
Planning for effective use of fire and rescue service resources <i>Tobias Andersson, Linköping University and S Särdaqvist, Swedish Rescue Services Agency, Sweden</i>	1561
Tactical patterns and their implications on fire fighting operations <i>Stefan Svensson, Swedish Rescue Services Agency, Sweden</i>	1567
FIRE SAFETY ENGINEERING	1573
Use of fire safety engineering and fire risk analysis in heritage buildings <i>Tuomo Rinne, J Hietaniemi, VTT, Finland</i>	1575
Fire accident safety scenarios employing detailed modeling and simulation: A case study <i>Alexander Brown, K Dowding, R Hogan, Sandia National Laboratories, USA</i>	1581
Design fires and sensitivity analysis – A structured approach <i>James Boyes, G Timms, Arup Fire, Australia</i>	1587
Hazardous fires in children’s rooms – experimental and numerical investigation with comparison to real cases <i>Anja Hofmann, C Knaust, BAM and A Beard, Clariant GmbH, Germany</i>	1593
Implementation barriers and solutions to a fully risk informed UK – fire safety regimes <i>Stephen Mackenzie, Buro Happold and D Moore, Robert Gordon University, UK</i>	1599
SMOKE AND TOXICITY	1605
Smoke damage due to malodor and stain in fires <i>Geary Yee, T Aboyou, A Tewarson, FM Global, USA</i>	1607
Standard toxic potency indexes <i>Thibaut Steenhuizen, H Breulet, ISSeP and R Dewitt, Solvay, Belgium</i>	1617

Emissions from fires – methods, models and measurements <i>Anders Lönnemark, J Axelsson, M Simonson, SP Technical Research Institute, H Stripple, M Haeger-Eugensson, A Cousins, IVL Swedish Environmental Institute, B Rosén, Y Anderson-Sköld, SGI Swedish Geotechnical Institute, Sweden</i>	1625
Modelling generation and transport of toxic combustion products in enclosure fires using bench-scale test data <i>F Jia, A Mahalingam, M Patel, E Galea, University of Greenwich, FSEG, UK</i>	1631
Comparison of different analytical methods for the determination of HCN in combustion gases generated from polyurethane and sheep wool <i>Edith Antonatus, BASF AG, Germany</i>	1637
TRANSPORTATION AND TUNNELS	1645
Advanced fire suppression technology for aircraft: Findings of the next generation fire suppression technology program <i>Richard Gann, NIST, USA</i>	1647
Composite warships: Suggestion for fire test methods <i>Tommy Hertzberg, SP Technical Research Institute, A Lönnö, Swedish Defence Material Administration (FMV), Sweden</i>	1653
Study of the critical velocity in order to avoid the backlayering in fire tunnels <i>Jorge Capote, D Alvear, M Lázaro, P Espina, University of Cantabria, Spain</i>	1659
Fire detection in underground coalmines <i>Michael Hemingway, P Walsh, Health & Safety Laboratory, M Williams, Health & Safety Executive, S Hunneyball, TES Bretby and S Jobling, UK Coal, UK</i>	1665
Justification of a fire suppression system for a road tunnel <i>Robin Hall, Mott MacDonald, UK</i>	1673
Fire-congestion scenario study for a road tunnel <i>Boon Hui Chiam, L Wan Lim, Land Transport Authority, Singapore</i>	1679
Smoke evacuation from underground stations and short tunnels: Feasibility of a different approach <i>Jerzy Respondek, Sicherheitsinstitut, Switzerland</i>	1687
Safety approach for fixed fire-fighting systems in road tunnels <i>Xavier Ponticq, B Brousse, Centre d'Etudes des Tunnels, France</i>	1693
Principles for the selection of evacuation routes in underground mall <i>Yuji Hasemi, S Moriyama, S Tsuchiya, J Ogawa, S Lee, T Jin, T Sano, Waseda University and W Weng, Waseda University Japan and Tsinghua University, PR China</i>	1699
Author Index	1711
